DRIVER BOOKLET

DONINGTON NATIONAL

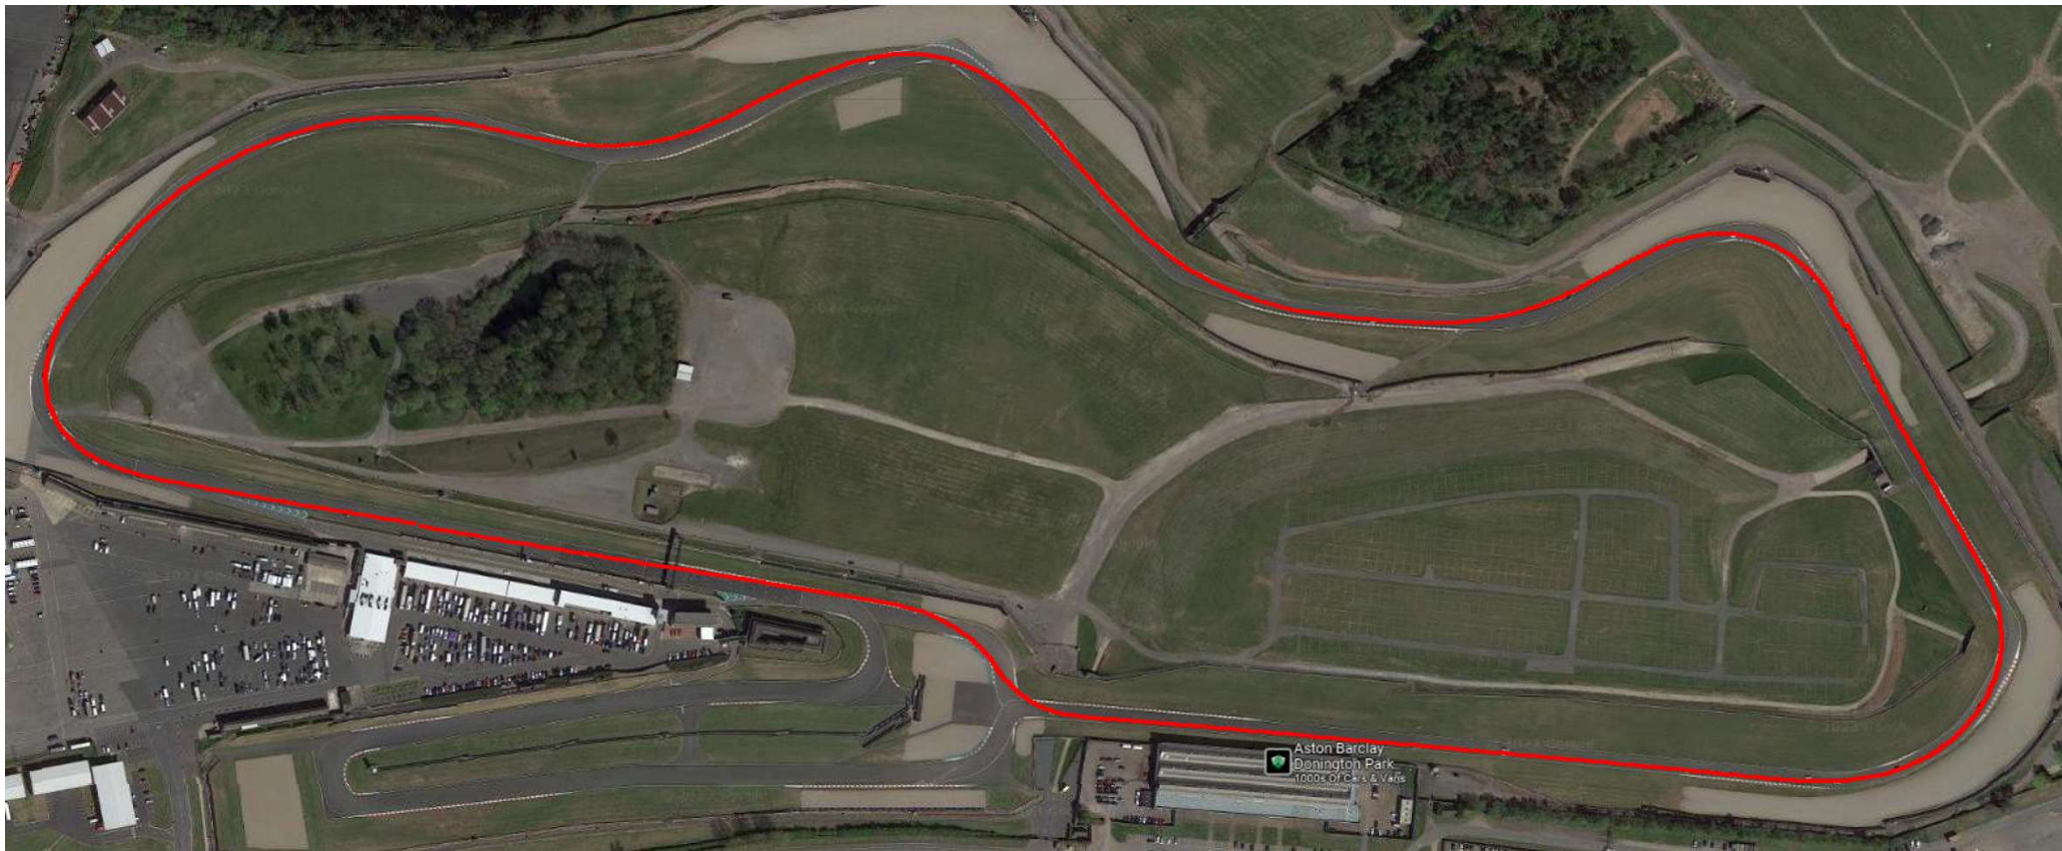

TO BE RETURNED AT THE END OF EVENT

RODIN
MOTORSPORT

DRIVING LINE

- Donington is a smooth, fast and undulating circuit. The key to being fast is keeping the momentum up. Good braking. Rotating the car well with brake release. **Getting strong exits is critical.**
- **Track limits are monitored via sensors on the exit of T1, T4, T7 and T10**
- The surface has been resurfaced. Be wary of the drop-step from the tarmac edge to the kerbs, especially when braking.
- The surface is smooth and is kind on the tyres. Avoid slipping the front tyres but keep the energy high whilst warming the fronts. Don't neglect the FR tyre while warming.
- This circuit is very rhythm-based. So don't expect your first push to be your fastest.

QUALIFYING - ROUNDS 1, 2 & 3 - CLASSIFICATION

No. 14, 21, 24, 47, 93 - 1 Lap time disallowed; exceeding track limits.
No. 13, 20, 25, 90 - 2 Lap times disallowed; exceeding track limits.
No. 5, 42 - 3 Lap times disallowed; exceeding track limits.
No. 12, 22, 26 - 4 Lap times disallowed; exceeding track limits.
No. 7 - 5 Lap times disallowed; exceeding track limits.

From 6th to 4th gear.

Brake straight with a flat wheel parallel to the dotted line (**A**)

Start to trail off the brake as you turn in just before the end of the dotted line (**B**).

The apex is just after the access road on the right. You should be back to flat by the apex (**C**). You can use all the apex kerb.

You can use the red/white exit kerb (**D**). There is a track limits sensor on the green.

The key to carrying good speed in this corner is strong entry rotation, which comes from a well-timed brake release. Brake late, compress the corner, and then get back to power by the apex. Try to keep coasting time to a minimum. **EXIT IS KING HERE.**

RODIN MOTORSPORT TURN 4 (old hairpin) 5th GEAR

6th to 5th gear.

Don't let the car run more than ½ car width from the white line as you come out of the left (A). Aim the car at the start of the entry kerb and brake in a straight line. Short, sharp brake. Prep is critical.

Turn in from the white line just after the start of the entry kerb (B). Bleed gently off the brake as you turn in.

Start to add power to settle the car before you get to the apex. You can use all the kerb at the apex (C). Get back to full throttle at the apex.

Use all the red/white exit kerb (D). There is a track limits sensor on the green, but it's quite early so you can get away with dipping a wheel on the green after it.

Get the car straight for braking. Think exit – getting back to throttle before the apex will let you take more kerb and help you carry more speed up the hill that follows

6th to 4th gear.

Turn late through the left kink and line up with the white line (A).

Brake in a straight line just after the end of the kerb on the left. Trail off the brake gently as you turn in (B).

The apex is quite late. You should be back to flat by the apex (C). If you are understeering you can take a little kerb to aid rotation, but the kerb is high so don't take much or it will unsettle the car.

Use the red/white kerb on exit (D). As with T2, there is a track limits sensor on the green so you can't run out wide early.

Unlike T1 this corner is all about **controlled** gradual rotation, so your brake release needs to be **smooth**. Think **exit** – if you can't get back to flat by the apex and keep the car on track at the exit, ask yourself if you are apexing too **early** or trying to roll too much minimum?

5th to 4th gear.

Try and avoid braking on the entry kerb. This can unsettle the car (A). Brake in a straight line then turn in gently using the crest to help rotate.

Start to pick up power to settle the car before you reach the apex. Take all the apex kerb (B).

Let the car run out to about 1m from the white line on exit (C). Minimise scrub – use just enough steering to stay this distance from the white line until you reach the exit kerb.

You can use a little exit kerb (D).

It's important to manage pitch here with your pedal inputs. All your rotation needs to happen before the apex. Turning late leads to oversteer and dropping a wheel on the exit. Focus on rotating early, then quickly applying throttle so settle the car. Rotate and go, Rotate and Go!!

6th to 4th gear.

Brake hard in a straight line from the white line (A). Drop the brake as you turn in.

Start to pick up throttle as you reach the first apex (B). All the kerb, right up to the bale.

You can take all the red/white kerb at the 2nd apex (C). Stay off the sausage kerbs.

Use the red/white kerb on exit (D).

Much like with T1, the key to carrying speed here is strong entry rotation. Compress the corner – drop the brake quickly for rotation then get back to power to settle the rear and drive through the chicane. Think exit!
